

Invevo Feature Upgraded Dashboard Experience

Invevo
AI Infrastructure for O2C

Build clearer, more useful dashboards with new insight types

Invevo's upgraded dashboard experience introduces new charts, widgets and content options for the workspaces your teams already use.

Admin users can create more informative dashboard experiences through Invevo's existing configuration process, with no new setup model required.

Make important information easier to understand

Operational dashboards often contain a significant amount of information. When every metric is presented in the same way, it can become difficult for users to identify priorities or interpret performance quickly.

The expanded insight library gives administrators more ways to present data according to its purpose.

Upgraded Dashboard Experience

New insight types include

- KPI insights for important measures at a glance.
- Gauge insights for presenting performance against a scale.
- Text insights for adding context and structure.
- Horizontal bar charts for clearer comparisons.
- Additional chart and widget options across the dashboard experience.

What it enables

- KPI insights for important measures at a glance.
- Gauge insights for presenting performance against a scale.
- Text insights for adding context and structure.
- Horizontal bar charts for clearer comparisons.
- Additional chart and widget options across the dashboard experience.

Why it matters

Different questions require different ways of presenting information. The expanded insight library helps administrators create dashboards that are easier for each role to interpret and use.

The upgrade is included for existing customers at no additional cost.
